MATCHING

Abstract: *Chlamydia trachomatis* is the most common bacterial sexually transmitted infection in the United States. The purpose of this study was to determine the prevalence of *C. trachomatis* in a community-based sample of men and women in the United States. A cross-sectional study was conducted in 1999 in a community-based sample of men and women in the United States. The prevalence of *C. trachomatis* was 1.1% (95% CI 0.4-2.8%) in men and 1.1% (95% CI 0.4-2.8%) in women. The prevalence of *C. trachomatis* was higher in men than in women (1.1% vs. 0.8%, *P* = 0.001). The prevalence of *C. trachomatis* was higher in men than in women (1.1% vs. 0.8%, *P* = 0.001).
